An invitation to shape flows

Prof. Dr. U. Stefanelli (IMATI-CNR, Pavia, Italy)

ulisse.stefanelli@imati.cnr.it

I shall describe some old and new ideas on two dimensional crystallization, either finite or infinite. In particular, I will show examples of interaction potentials whose ground states develop into the triangular, square, or hexagonal tassellations of the plane. Time permitting, I will comment on the few known facts in three dimensions.
